Jasper van Grootel

The Union collection consists of a variety of striking, wall sconces. Each model consists of different layers, unified into four unique wall luminaires: two solid models and two vibrant models with custom hexagon shape pattern perforations.

The Union wall lights offer both up- and downlight, and also indirect light that shines through the different layers in an atmospheric way.

With this collection, designer Jasper van Grootel wanted to design a wall fixture that really catches the eye and adds an aesthetic value to any interior, public or private. Even when the fixture is switched off, it is still a feast for the eyes!
